

The cleaning system for the profi-air pipe system: SaWi cleaning set for profi-air

Already during the intake of the pull unit, dirt and dust are removed and vacuumed by means of a conventional vacuum cleaner.

The second step of wiping ensures thorough cleaning of the pipe.

in cooperation with

Along with proper planning and sound, standard-compliant installation, it is the intended operation as well as regular filter exchange that provide a durable, clean and hygienically impeccable system. For this reason, it is normally enough to check the duct network for the necessity to carry out cleaning after 5-10 years.

If cleaning is required, FRÄNKISCHE in cooperation with FD-DS has developed a simple and delicate cleaning system that is perfectly suited for the profi-air components.

The cleaning process is based on the established household principle – first vacuuming, then wiping. The simple concept to ensure more hygiene in heat recovery ventilation: Our SaWi cleaning set for profi-air!

Here you will find an application video and further information on our cleaning sets.
