

Grease separators

EasyClean free UnderSink

KESSEL

The grease separator

for your kitchen with small quantities of wastewater
or a requirement for multiple small separators.

Grease separator *EasyClean free UnderSink*

In the food truck, in the takeaway restaurant, in the shopping centre or in a small club: Installation of large central grease separators is not possible everywhere. If this is the case, and only small volumes of wastewater are produced, then it's a clear case for the *EasyClean free UnderSink* grease separator – optimised for free-standing set-up where space is limited.

Its low weight and compact size enable easy handling. Thanks to its 360° rotatable and vertically adjustable swivel connection, the tank is particularly convenient to remove. The *EasyClean free UnderSink* grease separator has been tested on the test bench with 0.7 l/s and is therefore ideally suitable for the wastewater discharge from a sink – efficient at a favourable price in TÜV-tested quality.

① Grease separators ② Inlet ③ Outlet

100 % corrosion-free

The *EasyClean free UnderSink* is 100 % made of polymer. That makes it resistant to aggressive wastewater and particularly durable.

100 % waterproof and odour-tight

The tank of the *EasyClean free UnderSink* grease separator is water and odour-tight. We vouch for this with our KESSEL guarantee: In addition to the statutory provision, we provide a 20-year warranty on the leak tightness, fitness for purpose and structural stability of tank.

Inspection window

An inspection window is available for optional installation on site for visual checking of the grease layer thickness.

Tool-free installation

KESSEL makes the installation particularly easy for you: You do not need any tools to install the *EasyClean free UnderSink* grease separator – which also applies to the disposal.

Grease separator *EasyClean free UnderSink NS 0.7* for free-standing installation

The separator for greasy wastewater is suitable for free-standing set-up in frost-protected rooms below a sink and is manufactured without the need for metallic components in the tank. The collecting tank made of permanently resistant polymer (PP) is equipped with an integrated sludge trap. An odour-tight cover with all-round seal and clip closures makes easy access possible for cleaning and maintenance work. For easy removal, the separator has a quick-release connection to the pipe.

An inspection window for optional installation on site is available for visual checking of the grease layer thickness.

Technical data:

- Inlet/outlet Ø 50 mm
- Grease storage 8l
- Sludge trap 12l
- Total volume 33l

Material: PP

Delivery: Modular kit for assembly on site

Type of disposal: manual

Grease separators *EasyClean free / ground*

The versatile solution for free and underground installation

EasyClean free UnderSink for kitchens

EasyClean free for free stranding installation for basements

EasyClean ground for underground installations

The KESSEL grease separator *EasyClean free* combines ease of installation, cleaning performance and energy efficiency. The narrow tank shape offers two advantages: 1) the complete technology can be integrated on the base area of the separator. 2) easier to transport the grease separator through narrow entranceways and set it up directly against the wall, saving a great deal of space.

Underground installation outside the building is a space saving alternative to indoor installed separators. Here, we offer a wide range of grease separators with the *EasyClean ground* that combines the advantages of the *EasyClean free* with more usable operating space.

Under our protection: We manage water in every form

Water is the most important element on our planet. It is our basis of life. For many years, we have therefore been developing innovative drainage solutions to protect people from water and water from people. We are no longer just "leading in drainage", but are going one step further: We master the element of water in buildings in all dimensions.

mastering **water**

Water is our element:
innovative drainage solutions from KESSEL

We understand and respect water in all its manifestations – from water droplets in the shower to heavy rain with massive amounts of precipitation. This is the only way we are repeatedly able to meet all the challenges of drainage technology with innovations in outstanding quality: from backwater protection to separation technology and drainage technology to pumping stations and lifting stations.
